

INTRODUCTION

Violence against women and children is a serious public health concern, with cause at multiple levels of society. All thought violence is a threat to everyone, women and children are particularly susceptible to victimization because they often have fewer rights or lack appropriate means of protection.

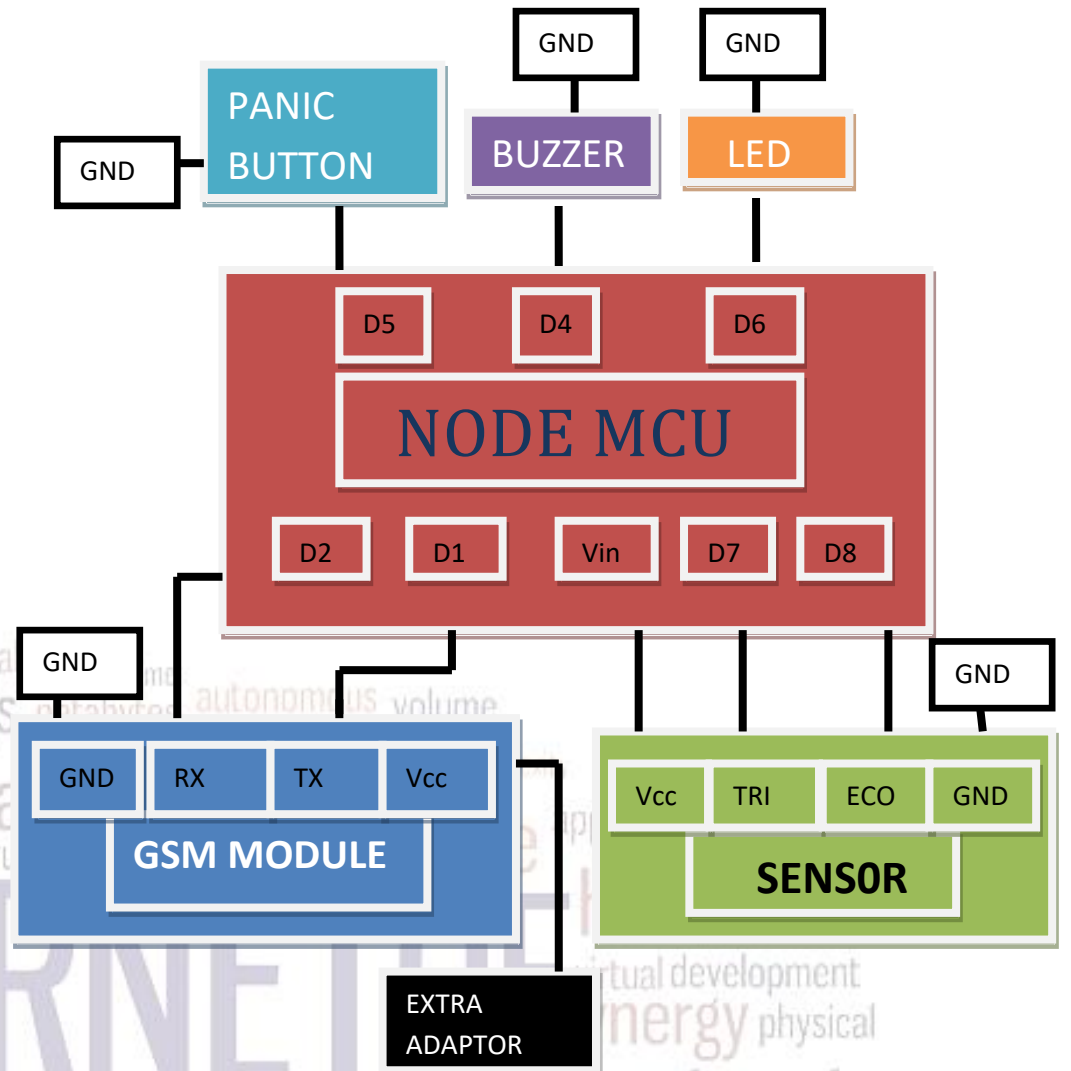

MOTIVE

Our project motive is to help resolve this issue we propose a GPS based women's and children safety system that has dual security feature using IOT. This can be used as wearable devices.

WEARABLE DEVICES

BLOCK DIAGRAM

CONCLUSION

This device will deal with most of the critical issues faced by women and children and also help them to be secured. Our project helps to decrease the crime rate against women.
